

Automatic translation: German to Simple German a Prototype

University of applied Science Darmstadt
Special Field Media

Presentation for the workshop Aspects of Linguistic Complexity
Author: Andreas Stiegemayr

Teacher: Prof. Dr. Melanie Siegel

Presented at 8.05.2018

1 Introduction

1.1 Motivation 1.2 Research Question 1.3 Goals

Why do we need Simple Language?

- Inclusion of people with disability's
- Reduction of risks at work
- European law

Problems in the area of machine Natural Language Processing

- Not enough data

1 Introduction

1.1 Motivation 1.2 Research Question 1.3 Goals

- “Is it possible to built a program under use of the language tool to translates German into Simple German?”

1 Introduction

1.1 Motivation 1.2 Research Question 1.3 Goals

Presents a way to
automatic translation from
German to Simple German.

Gives a quick overview of
the tools I used to create
the prototype.

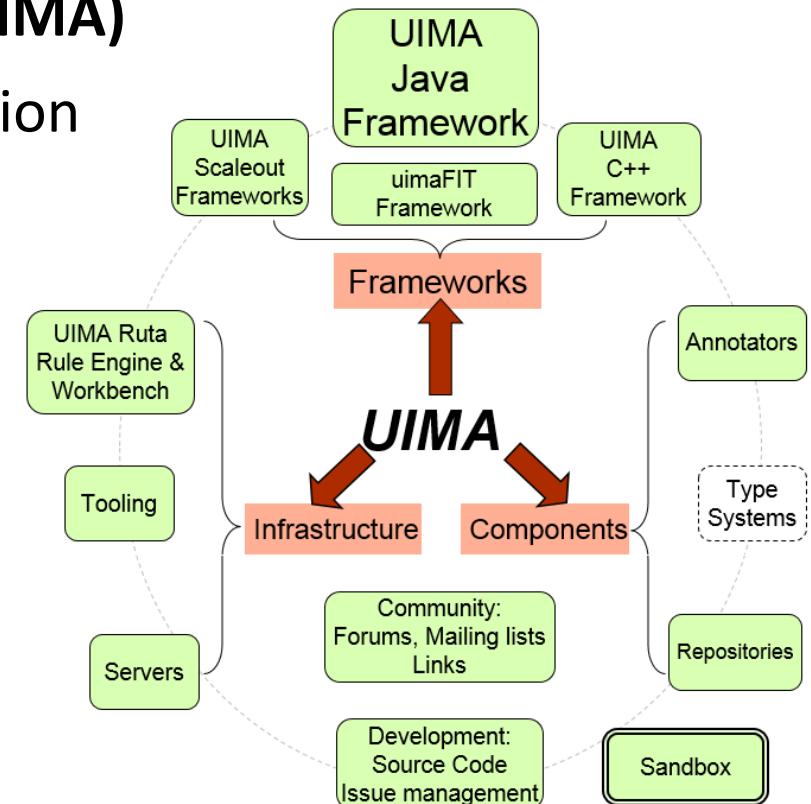

2 Tools

2.1 Apache UIMA 1.2 DKPro 2.3 Language Tool

Unstructured Information Management Applications (UIMA)

- Java Framework to analyse large unstructured information
- Examples for use:
 - language identification
 - language specific segmentation
 - sentence boundary detection
 - entity detection

UIMA: <https://uima.apache.org/>

2 Tools

2.1 Apache UIMA 1.2 DKPro 2.3 Language Tool

DKPro Darmstadt Knowledge Processing Repository

- DKPro is a Natural Language Toolkit based on UIMA
- Easy accessible with Maven
- DKPro Components:
 - DKPro Core
 - DKPro TC
 - DKPro Statistics
 - DKPro Similarity
 - DKPro UBY
 - DKPro WSD

```

private static CollectionReaderDescription reader;
private static AnalysisEngineDescription transformText;
private static ClassLoader classloader = Thread.currentThread().getContextClassLoader();

public static void main(String[] args){

    try {
        reader = createReaderDescription(TextReader.class,
                                         TextReader.PARAM_SOURCE_LOCATION, classloader.getResource( name: "data/corpus.txt" )
                                         );
        transformText = createEngineDescription(TransformText.class);

        SimplePipeline.runPipeline(reader, transformText);
    }catch (UIMAEException | IOException e){
        System.out.println(e.getMessage());
    }
}
  
```

```

    </dependency>
  </dependencies>

```

DKPro: <http://dkpro.github.io/>

2 Tools

2.1 Apache UIMA 1.2 DKPro 2.3 Language Tool

DKPro Core Components

- Reader (Text, Brat, Conll, XML, Tiger XML etc.)
- Text analysis (Chunker, POS Tagger, NER, Parser, etc.)
- Writer

DKPro TC Components:

- Text analysis (avg. Token, avg. POS Tags, Number of Character etc.)

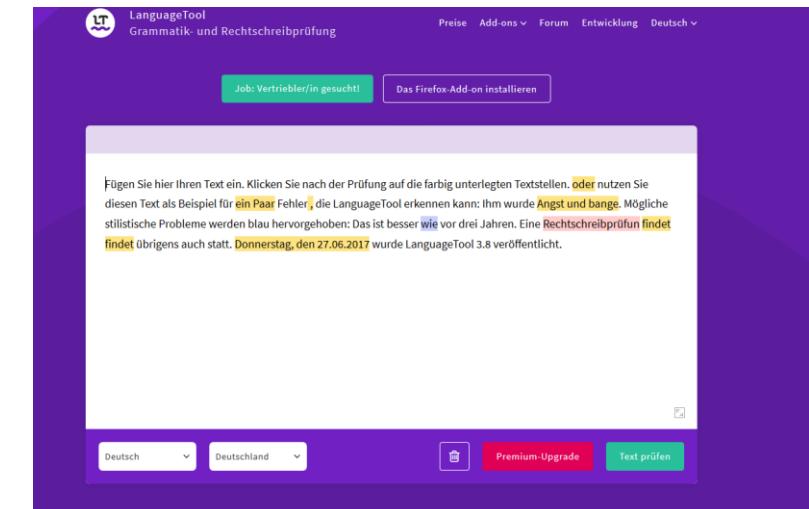

2 Tools

2.1 Apache UIMA 1.2 DKPro 2.3 Language Tool

Language Tool

- Java Framework for Natural Language Processing
- Language Tool Components:
 - Simple Speech (German)
 - Grammar Checker
 - Lemmaticer
 - Etc...

Language Tool: <https://languagetool.org/>

3 Experiment

3.1 Data 3.2 Presentation 3.3 Results

What kind of Data can we use?

- Any digital plane text
- Text of the demo is from Wikipedia:

Eine **Korrelation** ([mittellat.](#) *correlatio* für „Wechselbeziehung“) beschreibt eine Beziehung zwischen zwei oder mehreren Merkmalen, Ereignissen, Zuständen oder Funktionen. Zwischen Merkmalen, Ereignissen oder Zuständen braucht keine [kausale Beziehung](#) zu bestehen: manche Elemente eines Systems beeinflussen sich gegenseitig nicht; oder es besteht eine [stochastische](#) (= vom [Zufall](#) beeinflusste) Beziehung zwischen ihnen.

3 Experiment

3.1 Data 3.2 Presentation 3.3 Results

- Have fun with the presentation of the Prototype
-

3 Experiment

3.1 Data 3.2 Presentation 3.3 Results

Eine Korrelation **mittellat. correlatio** für Wechselbeziehung beschreibt eine Beziehung zwischen **2** oder mehreren Merkmalen, Ereignissen, Zuständen oder Funktionen. Zwischen Merkmalen, Ereignissen oder Zuständen braucht keine kausale Beziehung zu bestehen: manche Elemente **von dem System** beeinflussen sich gegenseitig nicht; oder es besteht eine stochastische = vom Zufall beeinflusste Beziehung zwischen ihnen.

4 Future Work

- Convert integrate bracket text
- Acronym detection
- Possibility of detecting phrases and transform them into Simple Speech

5 Conclusion

It is possible to create a program that can help to transcribe a corpus from German into Simple German.

Thank you for your attention!
